■ For Noisy Power Supply

In case of noisy power supply, please serially insert 100Ω resistor and about 47 μF electrolytic capacitor in Vcc line and ground as follows:

TIA Transimpedance amplifier
CGA Controlled gain amplifier
BPF Bandpass filter
AGC Automatic gain control

ATC Automatic threshold control
DEM Demodulator
INT Integrator
ST Schmitt trigger

■ Testing Method

Distance between emitter and detector specifies maximum distance that output waveform satisfies the standard (FIG-3) under the standard transmitter.

a. Measuring place

Indoor Without extreme reflection of light.

b. Ambient light source

Detecting surface illumination is 200 ± 5 Lux under ordinary white fluorescence lamp of no high frequency lightning.

c. Standard transmitter

Transmitter wave indicated in FIG-2 of standard transmitter is arranged to satisfy $V_O \geq 50\text{mVp-p}$ under the measuring circuit specified in FIG-3

■ Precautions for Use

- Store and use where there is no force causing transformation or change in quality.
- Store and use where there is no corrosive gas or sea(salt) breeze.
- Store and use where there is no extreme humidity.
- Solder the lead pin within the condition of ratings. After soldering, do not add exterior force.
- Do not wash this device. Wipe the stains of diode side with a soft cloth. You can use the solvent, ethyl alcohol, or methyl alcohol only.
- To prevent static electricity damage to the pre-amp, make sure that the human body, the soldering iron are connected to ground before using.
